

Create a simple, clear, step-by-step algorithm for a Medical Management System using the following information:

Patient Details

Doctor Details

Appointment

Medical History

Prescription Details

The algorithm should include:

Start

Enter patient details such as Patient ID, Name, Age, Gender, and Contact Number.

Enter doctor details such as Doctor ID, Name, Specialization, and Contact Number.

Book an appointment by entering the appointment date and time.

Check and record the patient's medical history.

Doctor examines the patient and provides diagnosis.

Enter prescription details such as medicines, dosage, and duration.

Store all patient, doctor, appointment, medical history, and prescription details.

Display the appointment and prescription details.

End.

Use simple language and proper numbered steps suitable for BCA students.
